

# North West and North East Cheetah Research

Very little is known about the highly threatened cheetah subspecies native throughout central and west Africa. Working with African Parks, Ashia has deployed a PhD student to the W-Arly-Pendjari Complex in West Africa and Zakouma National Park and Siniaka Minia Wildlife Reserve in Chad, to update our existing knowledge of West African cheetah numbers, status, and ecology. This data is fed directly into African Parks management and policy around protecting highly threatened cheetah subspecies.
